Comments:

Examiner Pham:

Enclosed is an Applicant Initiated Interview Request Form in connection with a scheduled June 24, 2008 Interview at 1:30PM regarding U.S. Patent Application No. 10/659,642. Should you have any questions, please do not hesitate to contact me at 212-692-6858.

Respectfully Submitted,

Boris A. Matvenko

Please call us at 212-935-3000 if you experience any problems.

STATEMENT OF CONFIDENTIALITY

The information contained in this fax is intended for the exclusive use of the addressee and may contain confidential or privileged information. If you are not the intended recipient, you are hereby notified that any form or dissemination of this communication is strictly prohibited. If this fax was sent in error, please immediately notify us by phone.

CONTINUATION SHEET
ISSUES PROPOSED FOR DISCUSSION AT THE INTERVIEW

Examiner Pham:

Applicants respectfully request the Examiner to grant Applicants a telephonic interview at a time convenient to the Examiner to discuss rejections issued in the Office Action, mailed March 6, 2008. In that regard, Applicants submit the following summary of issues to be discussed at the telephonic interview. Applicants request this telephonic interview in advance of a submission of their response to the outstanding March 6, 2008 Office Action.

In the Office Action, the Examiner rejected claims 1-15 under 35 U.S.C. 103(a) as being unpatentable in view of various combination of U.S. Patent Publication No. 2004/0049513 to Yakir (hereinafter, "Yakir"), U.S. Patent No. 5,991,753 to Wilde (hereinafter, "Wilde"), U.S. Patent No. 5,564,037 to Lam (hereinafter, "Lam"), and U.S. Patent Publication No. 2002/0055972 to Weinman (hereinafter, "Weinman").

Yakir:

Yakir fails to disclose wherein the repository nodes store a replica of the file and maintaining, at the destination fileserver, a list of repository nodes that contain a replica of each file in the set of files, and a list of files in the set of files stored at the destination fileserver, as recited in claim 1. In contrast, Yakir includes file location information using which Yakir's SMS can find the file. Yakir does not maintain a list of repository nodes that have a replica of the file. Instead, Yakir stores "data locator information or portions thereof" in various storage locations.

Facsimile Transmitted to 571-273-3924
Date of Deposit: June 19, 2008

Attorney Docket No.: 25452-015

(Yakir, para. [0071]). The data locator information is stored in the stub file. (Yakir, para. [0071]). Yakir fails to disclose using the lists, initiating recovery of files in the set of files on the destination fileserver, using a stub file in the set of stub files, allowing access to a full content of a file associated with the stub file, as recited in claim 1.

Wilde:

Wilde fails to disclose receiving metadata and stub files associated with the set of files at a destination fileserver, as recited in claim 1. Wilde migrates a copy of an entire file rather than a stub file. (Wilde, Col. 5, lines 44-45). Further, Wilde retains a stub file that contains information about the file. (Wilde, Col. 5, lines 46-50). In contrast, the present invention receives metadata and stub files associated with the files, as recited in claim 1. Wilde also fails to disclose maintaining a list of repository nodes that are associated with each file in the set of files by updating a location components in the fileserver, wherein the repository nodes store a replica of the file, as recited in claim 1. Instead, Wilde generates a list of files that cannot be migrated, i.e., a locked list. (Wilde, Col. 14, lines 30-42). The present invention updates a location component that maintains a list of repository nodes as opposed to Wilde's list of files.

Weinman:

Weinman fails to disclose maintaining, at the destination fileserver, a list of repository nodes that contain a replica of each file in the set of files, and a list of files in the set of files stored at the destination fileserver, as recited in claim 1. Instead, Weinman determines whether too few or too many copies have been created and either adds or deletes copies of files. (Weinman, para. [0015]) and does not maintain any lists of nodes that have a replica of a file.

Lam:

Lam fails to disclose maintaining, at the destination fileserver, a list of repository nodes that contain a replica of each file in the set of files, and a list of files in the set of files stored at the destination fileserver, as recited in claim 1. Instead, Lam relates to staging out files that have not been accessed in some time from primary storage to secondary and tertiary storage.

Disadvantages of Prior Art:

- no disaster recovery when originating fileserver is not operational;
- recovery process is slow;
- cannot replicate metadata across multiple volumes, thus, no HSM-assisted disaster recovery;
- require manual access and reload of files and does not use automatic reloading of cached data
